

BOLSTERING CYBER-RESILIENCY AT POINT OF ATTACK WITH INFINISAFE

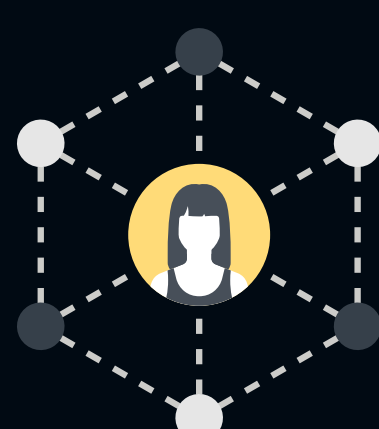

Threats and attacks remain top of mind for many organizations. Protecting critical data assets beyond the typical network-based attacks is more important than ever. InfiniSafe provides organizations with capabilities to help protect data assets where they are stored.

The rise in cybersecurity attacks and ransomware impacts how effectively organizations can keep applications running and decrease business risk.

By protecting data at the storage system level, InfiniSafe provides a line of defense for validation and recovery if an attack occurs. Data recovery must occur at speeds not capable by most backup applications. If not, organizations experience lost productivity, increased costs, and missed revenue. The longer-term impacts of brand erosion and loss of customer trust due to a security breach can also arise.

Loss of employee productivity,
46%

Loss of customer confidence,
35%

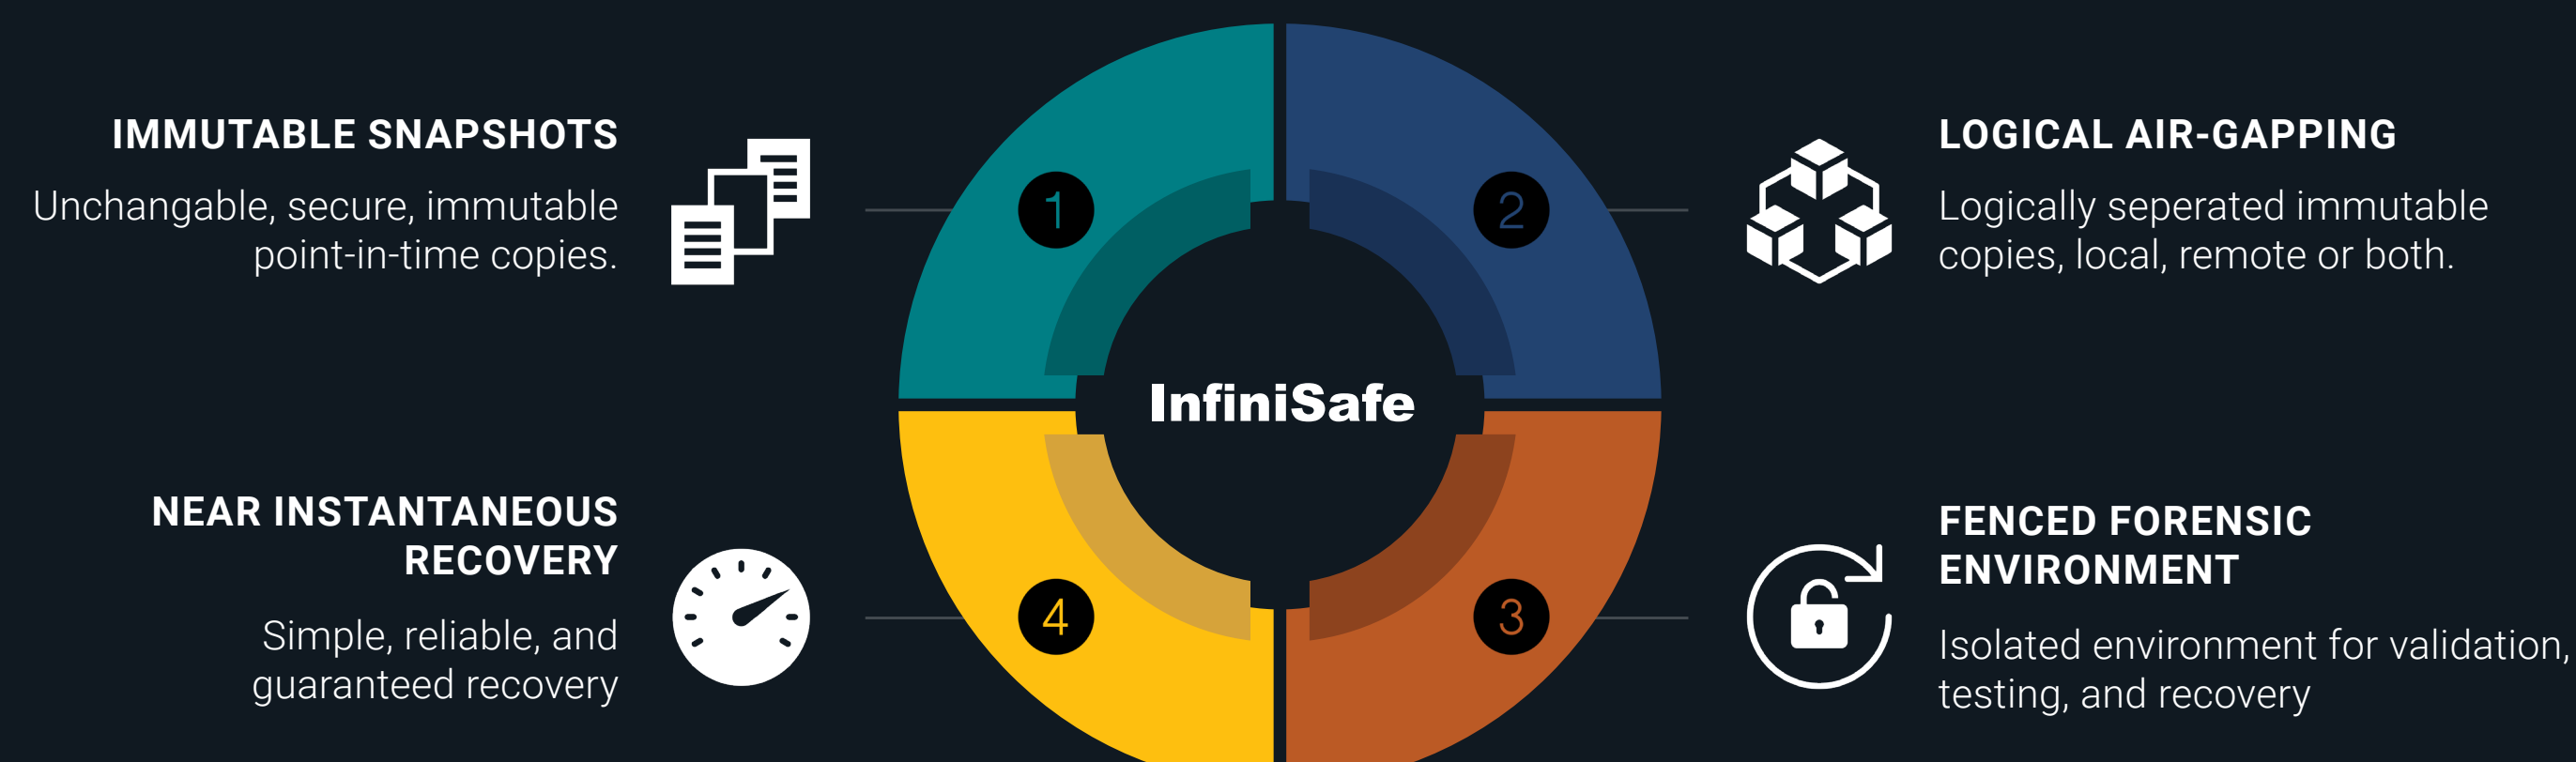

Loss of revenue,
32%

Secure data with Infinidat's InfiniSafe technology.

Infinidat built InfiniSafe into its portfolio to provide organizations with the capabilities for securing copies, isolating attacks, and recovering data quickly—a guarantee that Infinidat offers its customers.

InfiniSafe cyber-resiliency technology consists of four pillars:

InfiniSafe is built into the Infinidat portfolio, at no additional cost.

InfiniSafe on all InfiniGuard models protects entire backup server repositories. InfiniSafe on InfiniBox and InfiniBox SSA II primary storage can protect the source of an organization's data—all storage volumes—against cybersecurity threats and attacks.

Dedicated resources and simple reference architectures provide all the insights, automation, and orchestration needed to protect an organization's data in minutes, not days, weeks, or months.

In support of InfiniSafe, InfiniGuard's new model, the B4320, offers:

<p>Dedicated InfiniSafe Immutable Snap Space:</p> <p>1.4PB of useable space, with an effective capacity of up to 35PB of dedupe capacity for immutable snapshot storage. Logically air-gapped out of the main data path.</p>	<p>Full Dedupe Pool Capacity:</p> <p>2PB of usable capacity with up to 50PB of effective dedupe storage for all backups.</p>	<p>Extendable Retention for InfiniSafe, up to 2x longer (60 Days):</p> <p>Based on customer requests to maintain immutable snapshots for longer periods of time.</p>
---	---	---

To provide added assurance of InfiniSafe capabilities, Infinidat introduced the InfiniSafe Cyber Storage Resilience Guarantee.

The InfiniSafe Cyber Storage Resilience Guarantee is available across the Infinidat product portfolio and supports customers in maximizing availability when they need to recover compromised data. Infinidat guarantees data integrity and provides a recovery performance SLA regardless of dataset sizes.

<p>Recover immutable snapshots that are exact replicas of the point in time when taken.</p>	<p>Recover immutable snapshots in 20 minutes or less for InfiniGuard or 1 minute or less for InfiniBox or InfiniBox SSA, regardless of size.</p>	<p>Take advantage of the first recoverability guarantee in the industry for primary storage (InfiniBox).</p>
--	--	---

The Bigger Truth

With InfiniSafe, organizations can more easily protect data—their most valuable asset—against increasing numbers and severity of cybersecurity attacks and ransomware on both primary and secondary storage. Infinidat's cyber-resiliency guarantee gives peace of mind and removes the burden of operational complexity, unnecessary downtime, and business loss.
